

STEEL WIRE REMOVING MACHINE

It mainly helps customer by increasing feeding capacity of reactor and hence the product output

DESCRIPTION :

- It consists of a cutting blade made in a hook type fashion that helps to extract steel wire from tyre
- Hydraulic piston is attached to the blade hook
- Tyre is placed on the opposite side near black block & with the help of blade hook steel wire is extracted from the rubber part.

FH FABHIND[®]

BENEFITS :

- Steel wire can be easily removed from tyre, hence more numbers of tyre can be feed into reactor
 - Steel wire obtain has good value in market so it can be easily sell to steel dealers.
 - More tires can be feed into the reactor hence more output.
 - Low reactor maintenance
 - Less trouble in carbon output
-
